

Lucid Litter Bin - W2

Weight: 57 lbs. / 26 kg
Dimensions:
W : 17" H: 26" - 16 Gal.
W: 42 cm H: 67 cm - 60 ltr.

Lucid is a series of products created in a minimalistic design language. The straight thin lines gives a sharp and modern expression, while the round shapes makes it light and friendly. Perfect where you would like to accentuate the lines of the environment or want to add a minimalistic touch.

Installation:

The litter bin can be mounted directly on a ground surface material or delivered on a concrete base.

- Mount With Concrete Slab
- Surface Mount

To see details, please download the installations guide [here](#).

Color and materials:

All steel parts are hot dip galvanized to protect it from corrosion.

Surface: Powder coating in any Pantone color.

To see our proposals for Nordic inspired colors please download the Color sheet [here](#).

* Wood is not an option on this product.

Care and Maintenance:

Galvanized steel is resistant and has an extremely long shelf life and with powder coated surfaces, the need for maintenance of this is minimal.

If you wish to clean the product, please avoid high pressure water jetting as well as using rigid brushes, sponges containing steel or other sharp materials as this can scratch and make the materials vulnerable, which can lead to destruction and/or shorten the life cycle of the product.

When using detergents for washing and cleaning the products, it is recommended to use a neutral detergent without solvents and acid. Ecolabel products are among the least environmentally harmful in their category.

Sustainability:

In our design process, we always strive to find the right balance between function, design and operation. Our process considers external factors as well as environmental considerations. To find the right balance, we work with standard solutions for different parts to ensure that they can be replaced and repaired individually. This means that the litter bin is easy to repair, and the subsequent operation is simple and cost-effective.

The way we design allows us to extend the lifetime of the product by simply replacing parts instead of eliminating the entire product. Therefore, we help to manage nature's resources in a responsible manner.

(Replace damaged parts for longer life cycle - please contact us to order additional parts)

We Care!

In our design process, we focus on long-lasting design that supports repair, upgrading and recycling. By working with design in this way, we support the circular economy that focuses on sustainability.

It is beneficial for the environment if a product can circulate for a long time, because for example the product itself is long lasting, or its durability can be extended by maintenance and replacement of parts.

By this we help to preserve and convey nature's raw materials and natural resources in such a way that we leave a sustainable footprint.
